

CANADA FOUNDATION FOR INNOVATION

MSIF Workshop Panel 4

**Research facilities in a data-intensive and open-science world /
Situer les installations de recherche dans un monde à forte concentration
de données et à la science et aux données ouvertes**

**Moderator: Fred Whoriskey, Executive Director, OTN
Suzanne Beth, Principal Coordinator, Coalition Publica
Natalie Harrower, Executive Director, CRDCN / RCCDR
Kevin Krieger, Head Engineer, SuperDARN Canada**

November 3, 2023

CRDCN: pathways in an Open Science World

Dr. Natalie Harrower
Executive Director

CFI 2023 Major Science Initiatives Fund Workshop
University of Saskatchewan | 3 November 2023

The Canadian Research Data Centre Network is hosted by McMaster University, which is located on the traditional territories of the Mississauga and Haudenosaunee nations, and within the lands protected by the Dish with One Spoon wampum agreement. I would like to give honour and thanks to the Haudenosaunee and Anishanaabe nations and to recognize our responsibility, as guests, to respect and honour the intimate relationship Indigenous peoples have to this land

Canadian Research Data Centre Network

A premier research and training platform for the quantitative social and health sciences in Canada. Est. 2000

<https://crdcn.ca>

1 of 19

Of Canada's Major
Science Initiatives

2,400

Researchers

33

Secure data facilities

200+

Datasets

5,000+

Publications, articles,
policy reports, etc.

Our Vision

To be Canada's national platform for leading edge research and training in the quantitative social and population health sciences, creating social, economic, health and environmental benefits for Canadians

Our Mission

Enable quantitative researchers to address vital questions

Train the next generation of highly qualified personnel in social and population health sciences

Contribute to evidence-based policy and decision-making by facilitating access to relevant, timely and well-documented data supported by state of the art computing facilities

THE CRDCN PARTNERSHIP

CRDCN serves as a bridge between:

- Statistics Canada
- 33 university partners
- Prospective partners in the government, non-profit and private sectors

We provide researchers with secure access to the most sensitive microdata files, facilitate analysis, provide training, and create partnership opportunities.

Statistics Canada microdata subject areas

Agriculture and food

Business and consumer services and culture

Business performance and ownership

Children and youth

Crime and justice

Digital economy and society

Economic accounts

Education, training and learning

Environment

Families, households and marital status

Government

Health

Housing

Immigration and ethnocultural diversity

Income, pensions, spending and wealth

Indigenous Peoples

Labour

Population and demography

Science and technology

Society and community

Transportation

Travel and tourism

Example data sets

Aboriginal People's Survey

Canadian Community Health Survey

Canadian Housing Statistics Program

Canadian Survey on Disability

Census (including linkage to hospital data)

COVID-19 Survey Data (vaccinations, benefits payments, Portraits of Canadians)

Educational and Labour Market Longitudinal Platform

General Social Survey

Housing and Environment Survey

Labour Force Survey

Life After Service Survey

Longitudinal Administrative Databank

Longitudinal Immigration Database

Programme for International Student Assessment

Public Service Employment Survey

Social Assistance data (Ontario and BC)

More than 200 data sets are available

CRDCN Research Policy Snapshot

- ➔ *Effect of heat and air quality on elderly mortalities and emergency visits*
- ➔ *House Price Effects from Vancouver's SkyTrain Expansion*
- ➔ *How well is cannabis legalization curtailing the Illegal market?*
- ➔ *Impact of COVID-19 school closures on test scores*

Current Area of Focus: : Strategic Plan 2024-2029

Current Area of Focus: vRDC

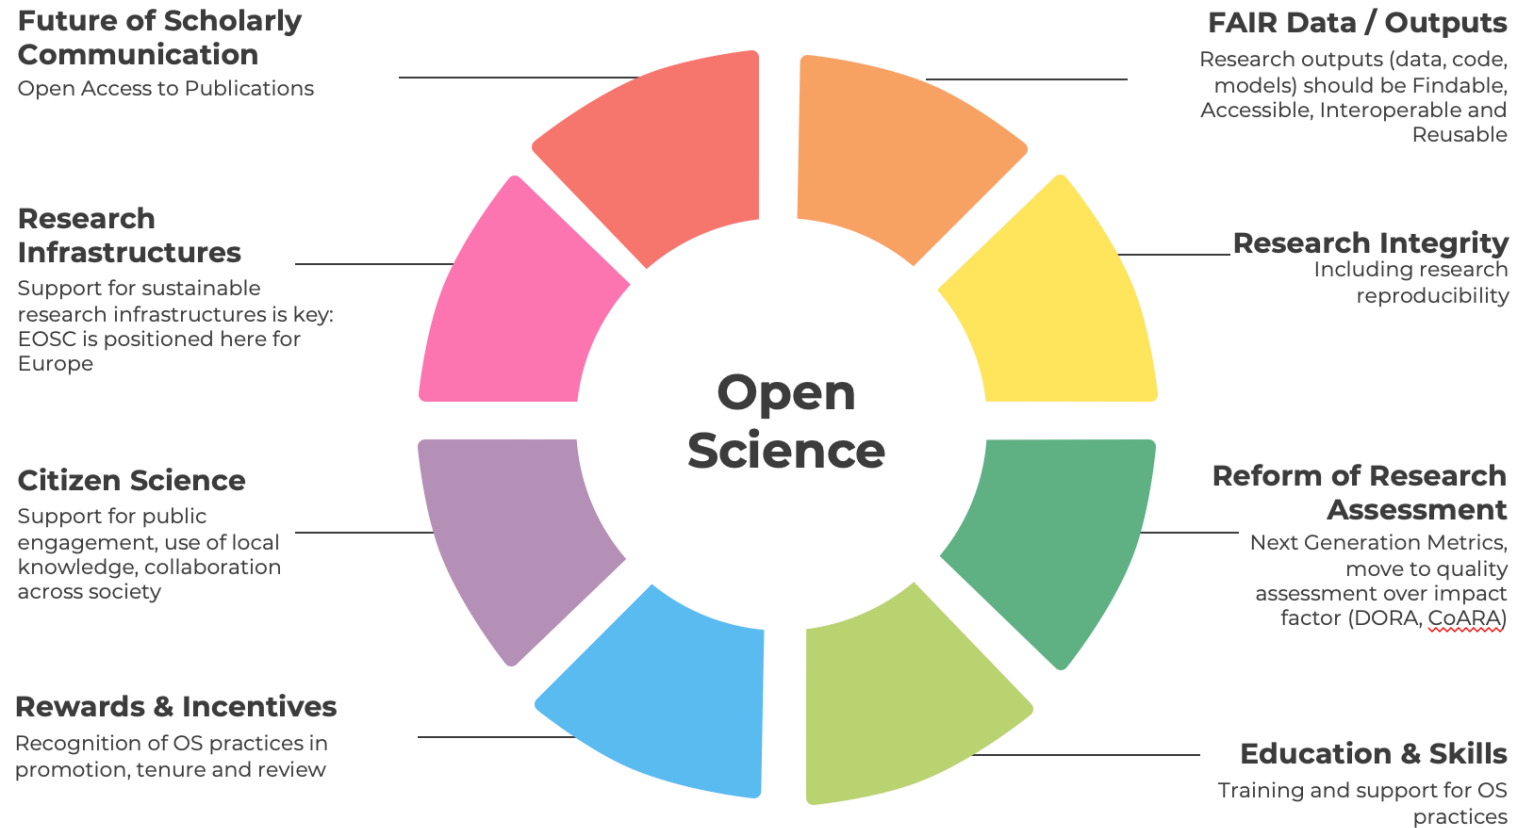

The Virtual Research Data Centre (vRDC) is a new platform for that both centralizes the network, and provides remote access from authorized home/office work stations.

Overhaul of storage, compute and networking capabilities to optimize network capability, facilitate analysis and storage of large datasets

Designed to meet the requirements of the evolving cybersecurity landscape

CRDCN and Open Science

Adapted from the European Commission's
8 Priorities/Pillars of Open Science

Open Science

FAIR Data / Outputs

Research outputs (data, code, models) should be Findable, Accessible, Interoperable and Reusable

Facilitating data sharing is our core activity

however...

Sharing of sensitive personal data comes with significant considerations and restrictions to ensure privacy

What role can we play in the Research Data Lifecycle?

Standardisation is key --

FAIR for sensitive data

FAIR data does not equal Open Data

PIDs for sensitive data

Citation practices

Code sharing to enable collaboration, efficiencies, transparency...even to improve access process?

Support for DMPs, collaborative spaces, communities of practice

Relationship building and knowledge exchange re OCAP principles, CARE principles

Increase Access to data through innovative methods (e.g. Data visitation?)

International Collaborations

What role can we play nationally?

CRDCN makes sensitive StatCan microdata available to researchers

Which also means we have a rich and varied community of researchers

What other elements of Open Science can we support?

Are there ways the MSIs can work together to collectively progress OS?

Policy, Advocacy, Support

Open Science is a complex jigsaw that requires all parts to move forward

Future of Scholarly Communication

Open Access to Publications

Research Infrastructures

Support for sustainable research infrastructures is key: EOSC is positioned here for Europe

Citizen Science

Support for public engagement, use of local knowledge, collaboration across society

Rewards & Incentives

Recognition of OS practices in promotion, tenure and review

Open Science

FAIR Data / Outputs

Research outputs (data, code, models) should be Findable, Accessible, Interoperable and Reusable

Research Integrity

Including research reproducibility

Reform of Research Assessment

Next Generation Metrics, move to quality assessment over impact factor (DORA, CoARA)

Education & Skills

Training and support for OS practices

Adapted from the European Commission's
8 Priorities/Pillars of Open Science

Leveraging Data, Research, and Policy Collaborations

Partnerships with purpose to benefit Canadians

Scholarly publication in Canada & open access

November 3, 2023

Canadian Foundation for Innovation – Major Scientific Initiatives Fund Workshop
Panel 4 – “Research Facilities in a data-intensive and open-science world”

Suzanne Beth
Érudit Consortium

COALITION
PUBLICA

Coalition Publica

→ Coalition Publica is a **partnership** between **Érudit** and the **Public Knowledge Project** (PKP) that supports the social sciences and humanities journal community in the transition towards **sustainable open access**

PKP
PUBLIC
KNOWLEDGE
PROJECT

COALITION
PUBLICA

érudit

→ Coalition Publica is developing a non-commercial, open source **national infrastructure** for digital scholarly publishing & dissemination combining **Open Journal Systems** (OJS) and the **erudit.org** platform

1. The scholarly publication system & open access

Scholarly publishing: a strategic sector at a tipping point

A key link in the research cycle

- Publication of **research results** & starting point of new inquiry
- Basis of **evaluation practices** in contemporary academia (citations, impact factor)

Open access movement

- Emergence in the 2000s in reaction to the “**Serials crisis**”
- As OA’s uptake is accelerating worldwide & **public policy** is aligning with it, it is reshaping the **conditions & practices of knowledge dissemination**

Open access & data management

Open access implies a **free circulation of research results** in order to maximize it, but it's not enough to ensure its **discoverability**

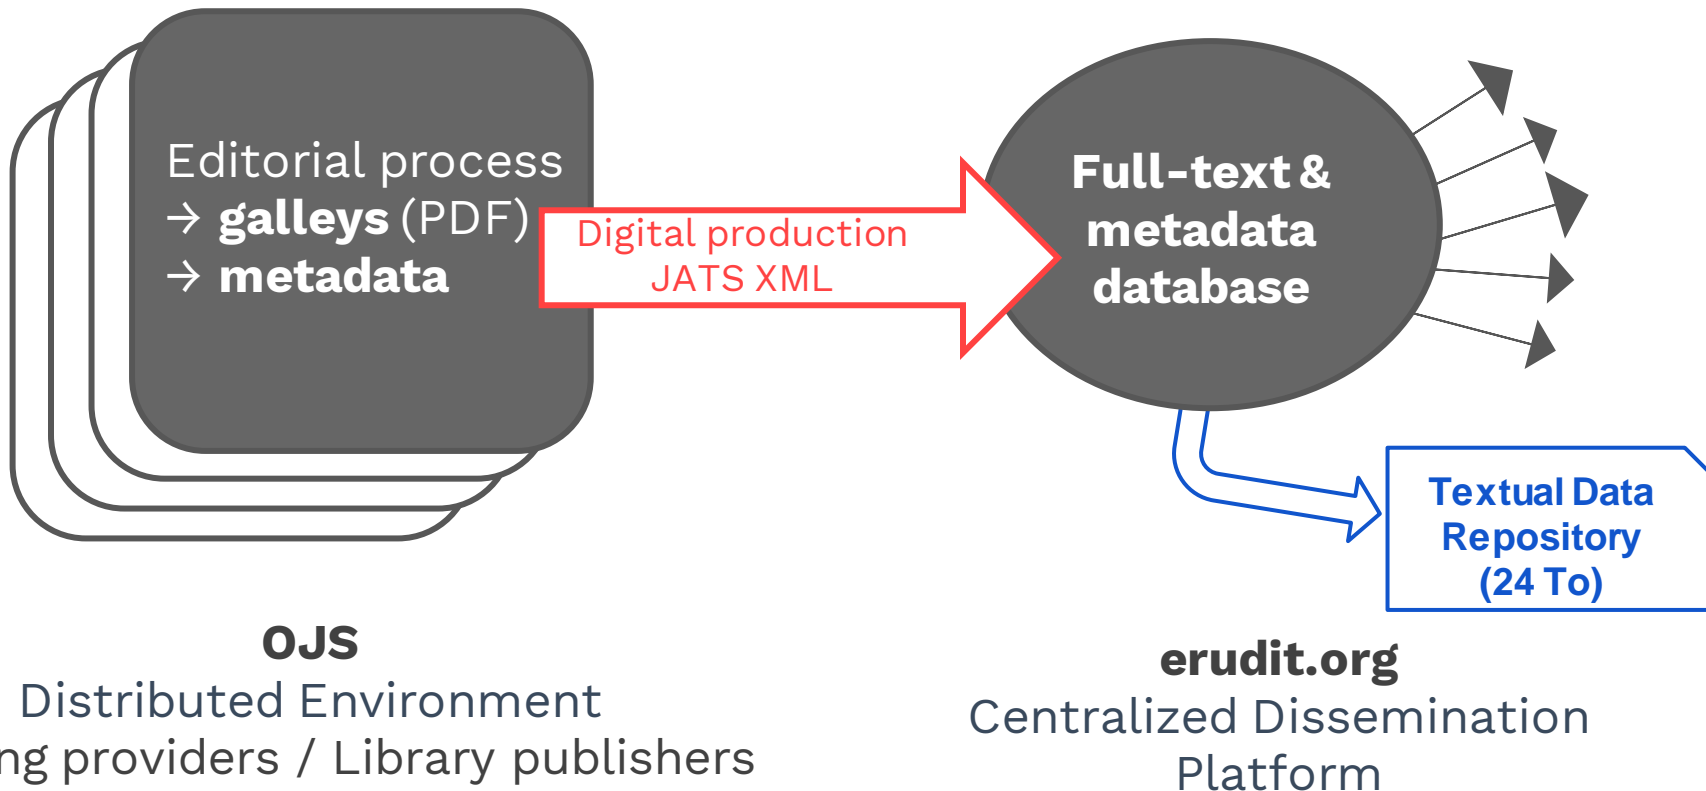

→ Coalition Publica offers a set of **services**, as well as **expertise**, to ensure and enhance the **discoverability and indexing** of Canadian scholarly journals in social sciences and the humanities

2. Coalition Publica: a technological infrastructure

National open infrastructure

+300,000 articles
98% OA
5.7 millions unique visitors (2022)

Editorial process
→ **galleys** (PDF)
→ **metadata**

Digital production
JATS XML

**Full-text &
metadata
database**

**Textual Data
Repository
(24 To)**

OJS

Distributed Environment

Hosting providers / Library publishers

erudit.org

Centralized Dissemination
Platform

Metadata curation

the bibliographic record, the ancestor of digital article metadata

Metadata link **data describing the article** (e.g. author, title, language, keywords, abstract, ISSN, volume) to the text itself, so that it can be **found, located & shared**

Metadata are standardized & can be **read both by machines (search engines) & by humans**

Metadata curation & discoverability

Metadata curation is key to widespread **indexing**, which determines articles' circulation, visibility and **discoverability**

Metadata are **harvested from OJS to erudit.org's** tools, and **converted to metadata formats** used by other databases (**interoperability**)

→ as a centralized dissemination platform, erudit.org is a **showcase for journals**

→ it is also a **relay toward other discovery databases**, e.g. Google, Google scholar, library catalogues, Scopus, WoS, PubMed, **DOAJ** etc.

Coalition Publicas's textual data repository: a treasure trove

Natively **digital & digitized documents** from 4 main sources:

- articles disseminated on erudit.org
- Canadiana/RCDR
- Library & Archives Canada
- Bibliothèque & Archives nationales du Québec

24 To: one of the **largest French corpus** in the world

Research potential:

- **data mining**
- **large language models** training

3. Expertise & funding:
two other key elements

Coalition Publica: a human infrastructure

Coalition Publica's **top expertise** in digital scholarly publishing in Canada is enhanced by close **collaboration with academic libraries**

Support, documentation, training

- OJS **technical support**
- OA **best practices** (metadata, persistent identifiers, licenses)

Concertation, leadership & advocacy

→ Scholarly publication in Canada as a collaborative, **fair & sustainable ecosystem**

Canadian Research
Knowledge Network
Réseau canadien
de documentation
pour la recherche

Fonds de recherche
Société et culture
Québec

SSHRC | CRSH

Digital Research
Alliance of Canada

Alliance de recherche
numérique du Canada

Funding: Partnership for open access (POA)

- Elaborated with the **Canadian Research Knowledge Network** (CRKN) in 2014 (Canadian academic library consortium)
- Transformation of traditional commercial relationships (subscription sales) into an **ecosystemic collaboration**
- Historic five-year agreement 2018-2022: included **revenues for OA journals**, successfully extended for 2023-2024
- **International** expansion: POA with Couperin Consortium (France) & BICfB (Belgium)

Diamond OA, the model of Canadian journals

A 2021 study found that Canada is home to over **480 active scholarly journals** published by non-commercial entities (e.g., libraries, universities, associations etc.):

- primarily (76%) in the **humanities and social sciences**
- with **small editorial teams** of 1-6 people
- and for those publishing immediate open access, 97% (n=283) operate on a **diamond OA model**

Access models: Active non-commercial, Canadian journals

Subject area: Active Canadian non-commercial journals

4. A concluding note on Indigenous Knowledge dissemination

Indigenous studies & Indigenous Knowledge dissemination

→ **Indigenous studies journals** participating in Coalition Publica

Working areas include:

- Publication languages (possible but very rare)
- Metadata categories (CP Metadata Working Group's recommendations)
- Dissemination modes/media (audio/video vs article)

→ Indigenous Knowledge dissemination: issue that will require long & thoughtful **consultation with communities** – we're really at the beginning

Thank you!

Suzanne Beth

Senior Coordinator, Research & Innovation
Érudit Consortium

Data Management Strategies and evolution over the past decade

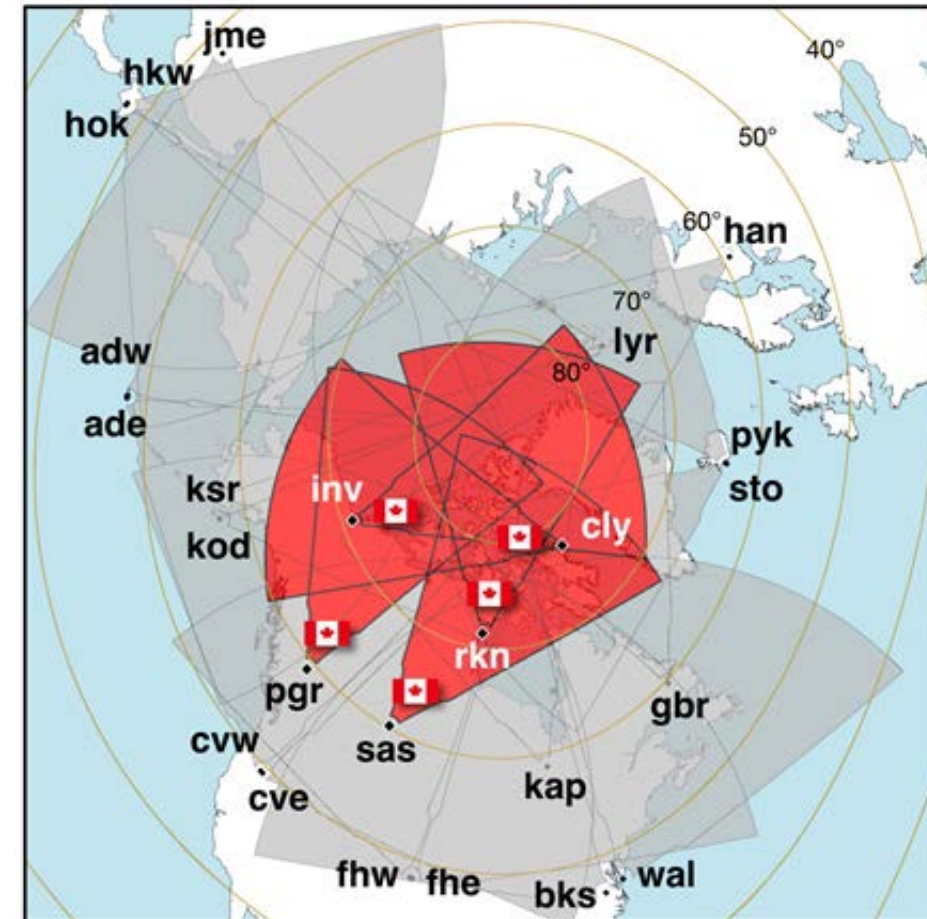

Kevin Krieger

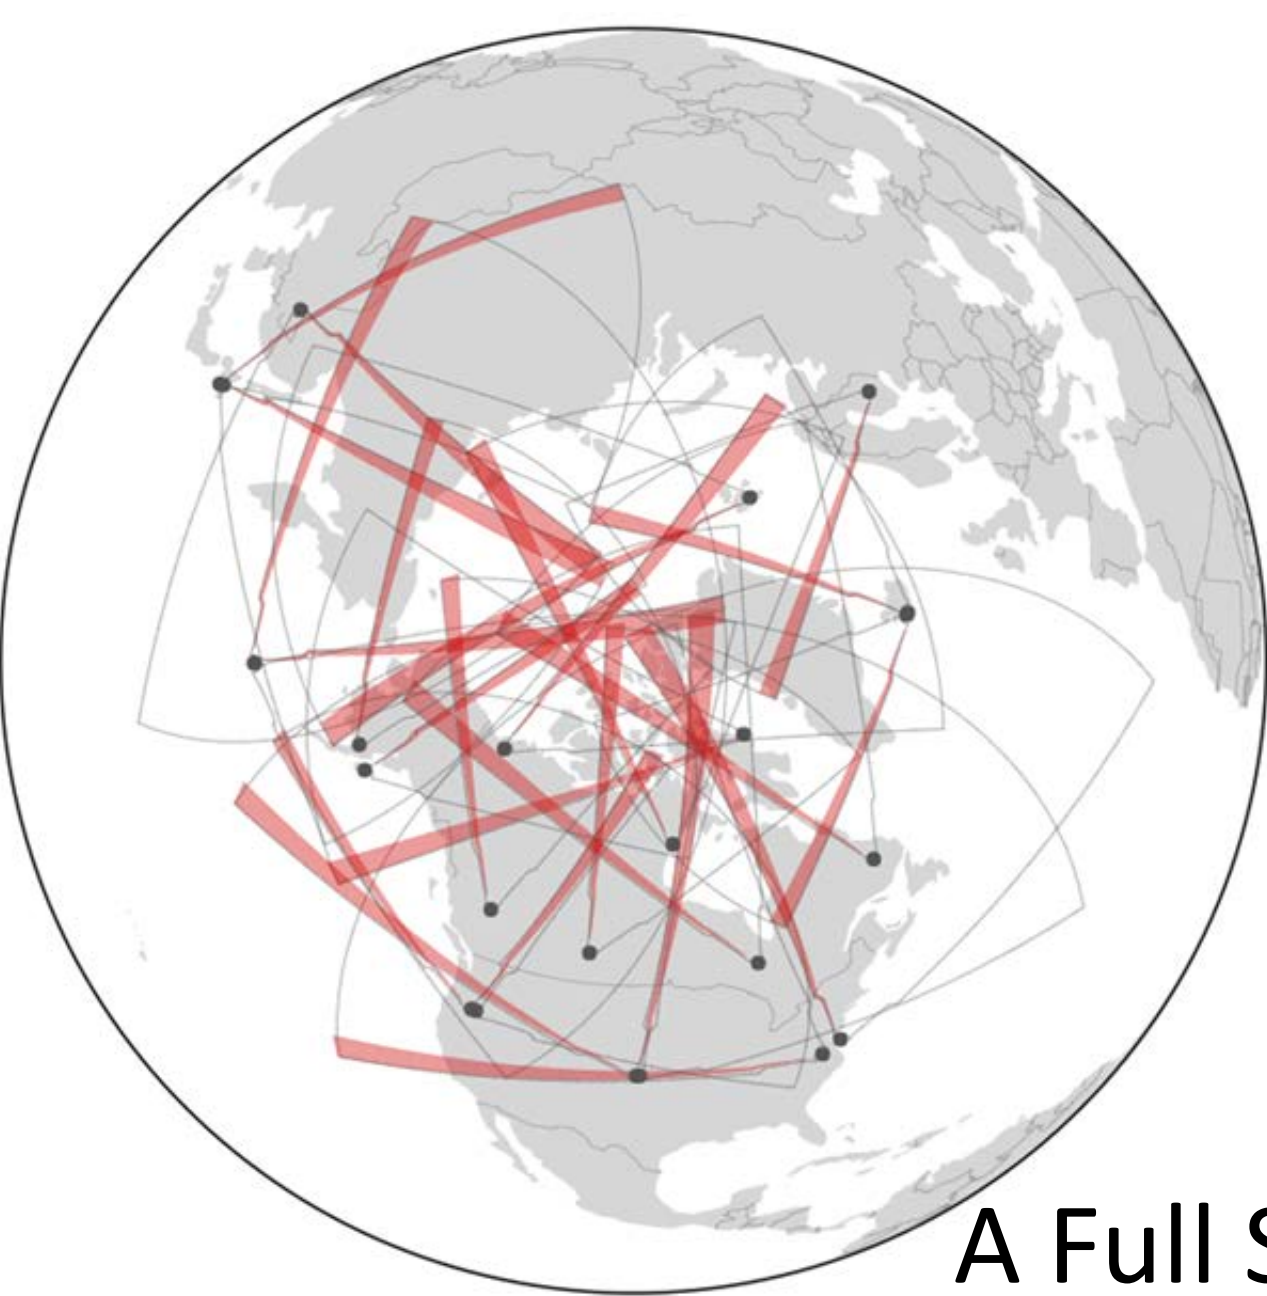

November 3, 2023

MSIF Workshop, Saskatoon SK

The Facility

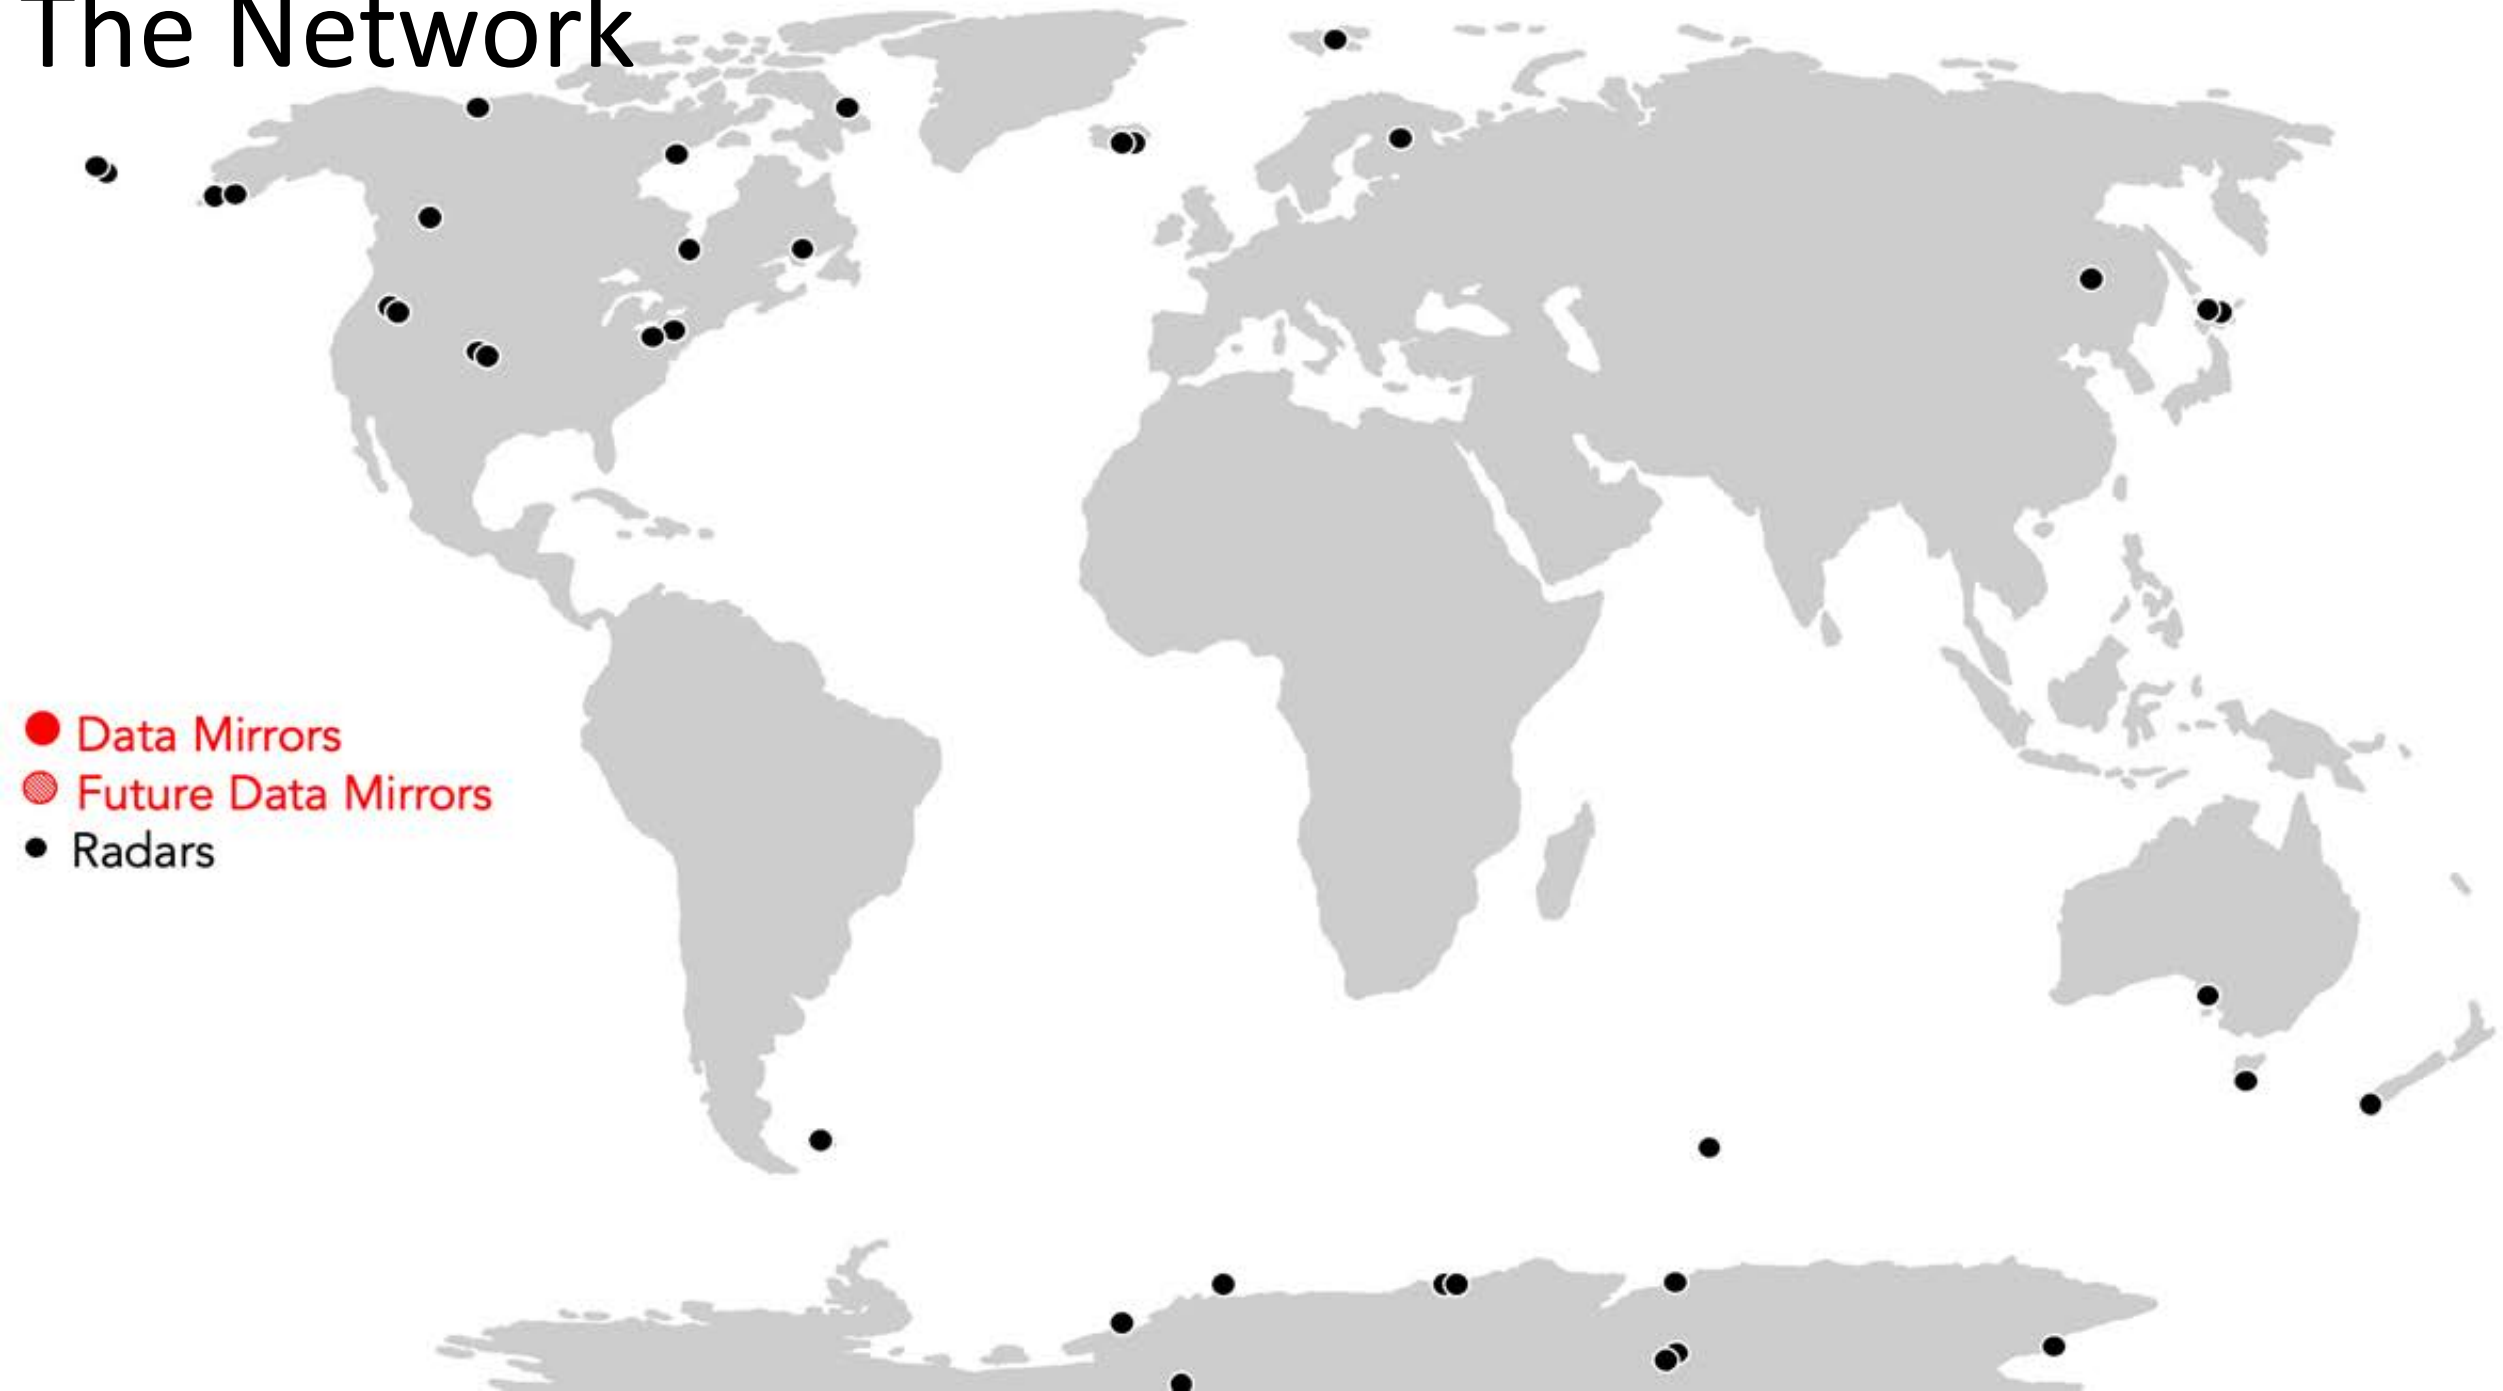

- 37 HF radars covering North/South
- 5 Canadian radars
- 16 Institutions
- 10 Countries
- Continuous operation since 1993
- 10 GB of data per radar-month

A Full Scan Every Minute

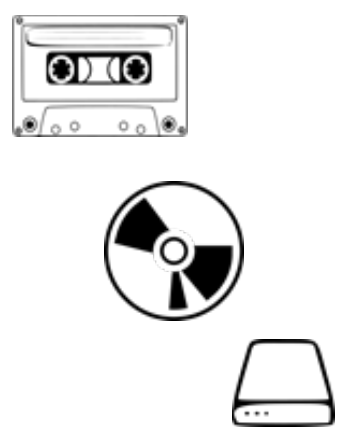

The Network

1993-2023: Three Decades of Data

Storage media

**Working Group
Online distribution**

Local servers

'The Cloud'

**Data loss and
recovery event**

**New
Capabilities**

**Ongoing
challenges**

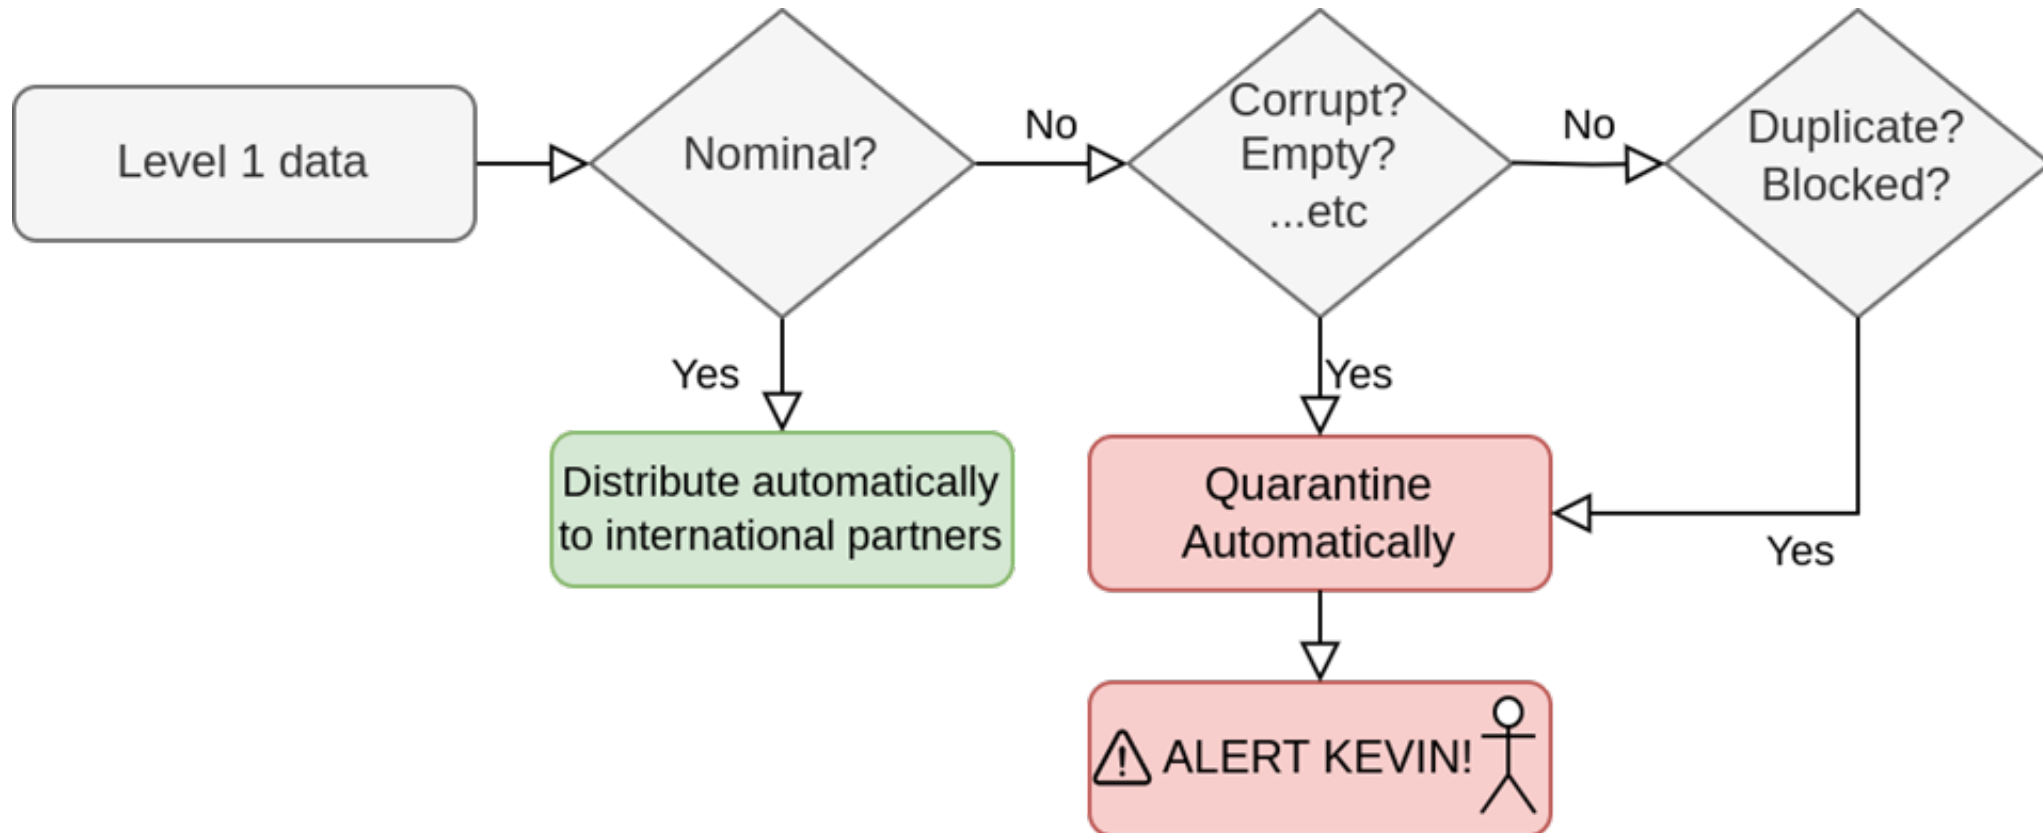

2013/2014: Organization, Online Distribution

Challenges

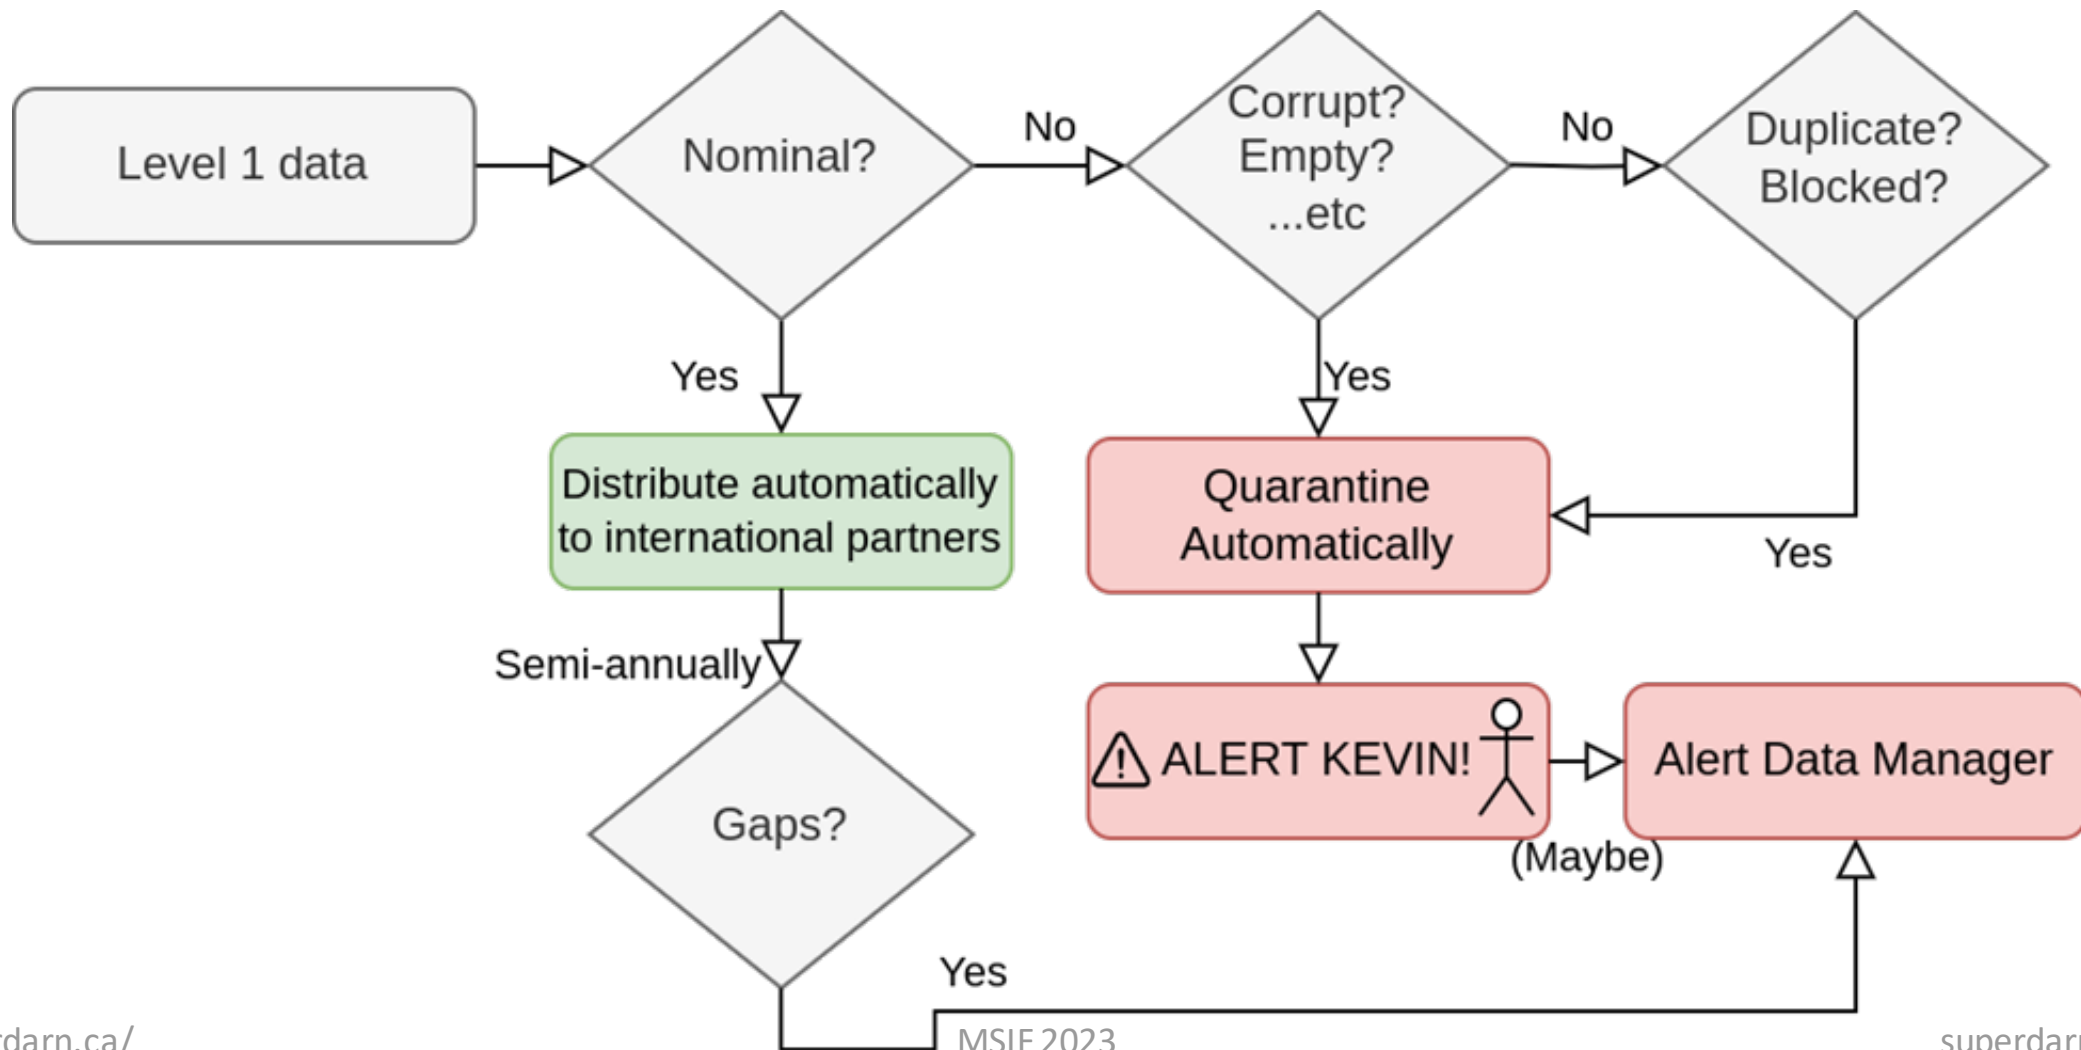

- Storage media failures
- International groups
 - Different policies
 - Slow transfers
 - 'packet boating'
 - Sporadic firewalls
 - Consistency of funding
 - Limited expertise

Goal: High Quality, Open, Canonical Dataset

Goal: High Quality, Open, Canonical Dataset

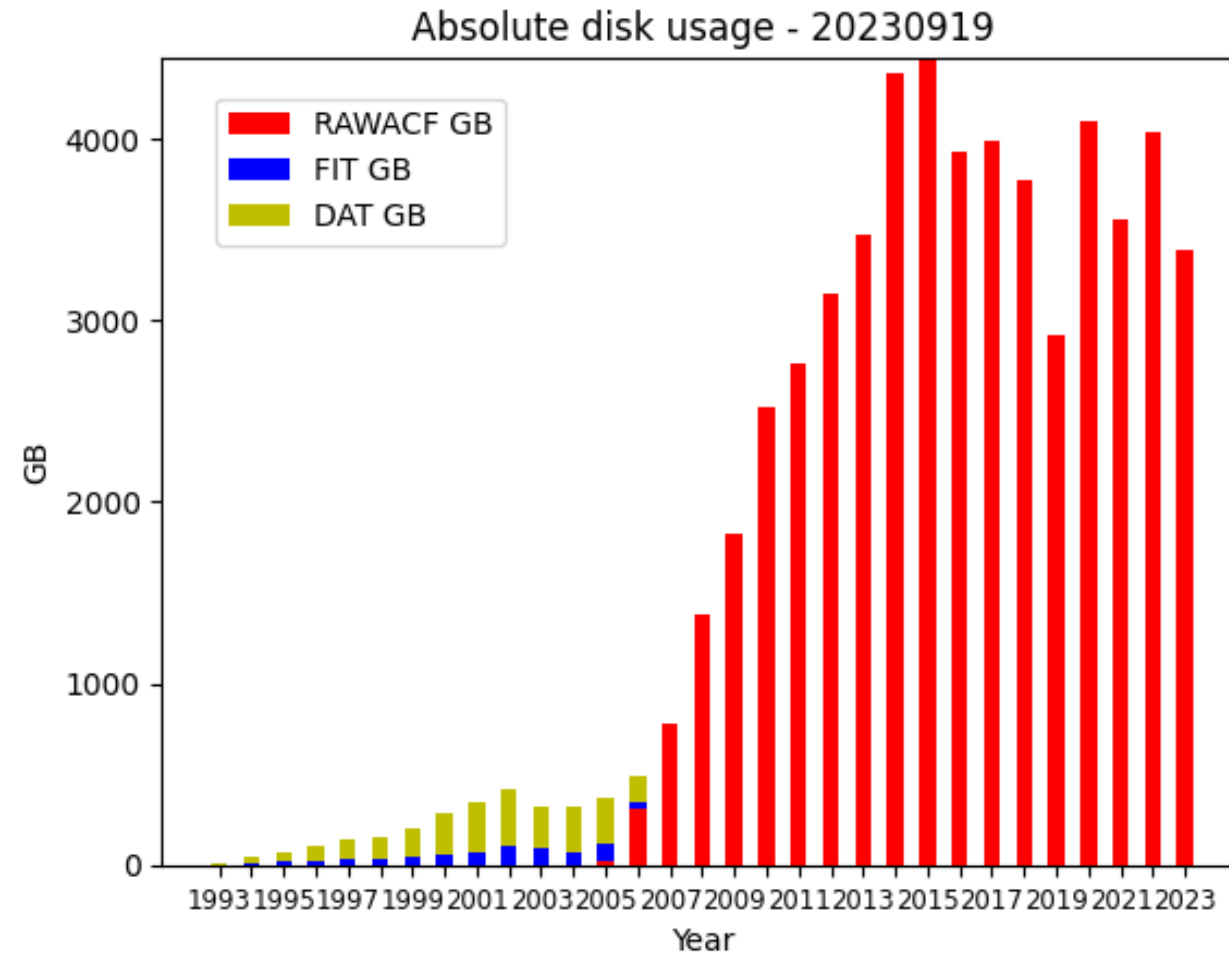

2015-2017: “The Cloud”

Opportunities

- Scaling up space and users
 - 2013: 10TB, 10 users
 - 2023: 105TB, 50 users

Challenges

- Less administrative control
- Proprietary transfer protocol
 - More clicks!
 - Change is difficult

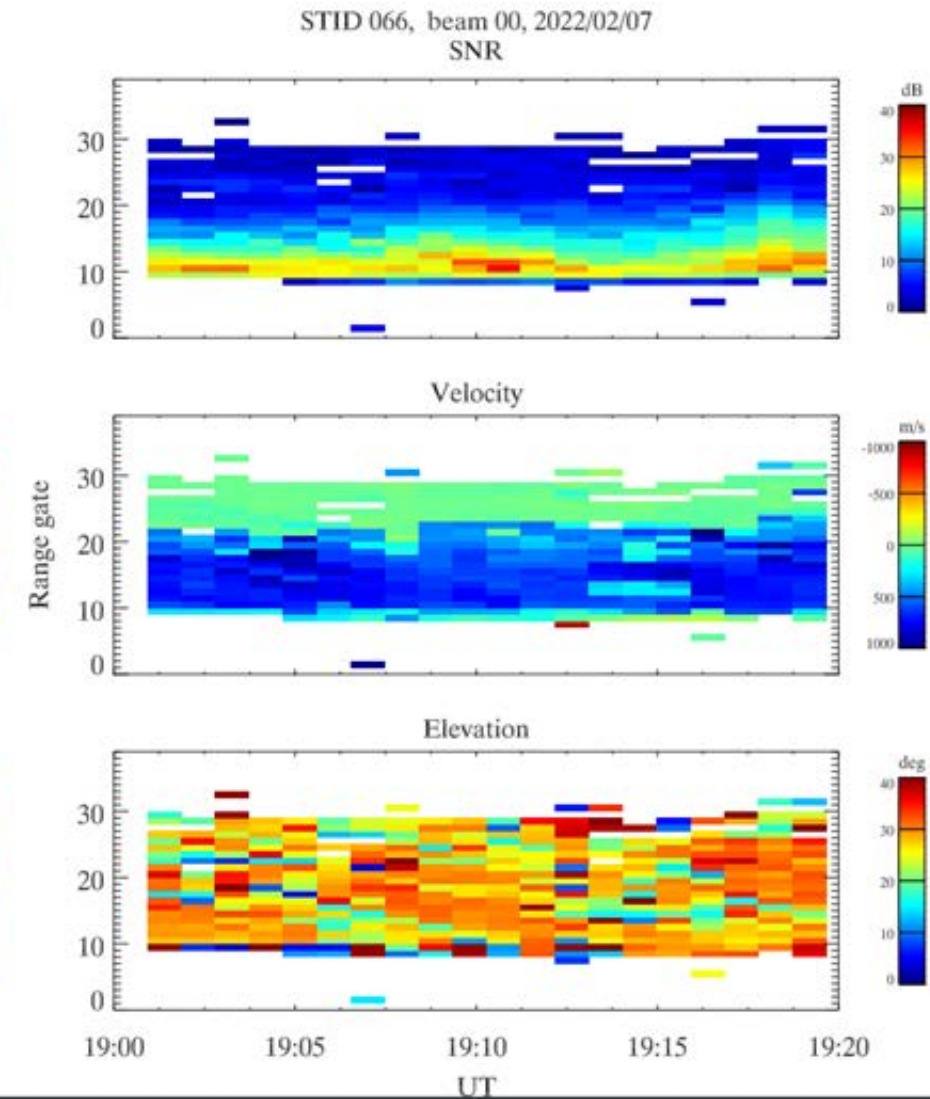

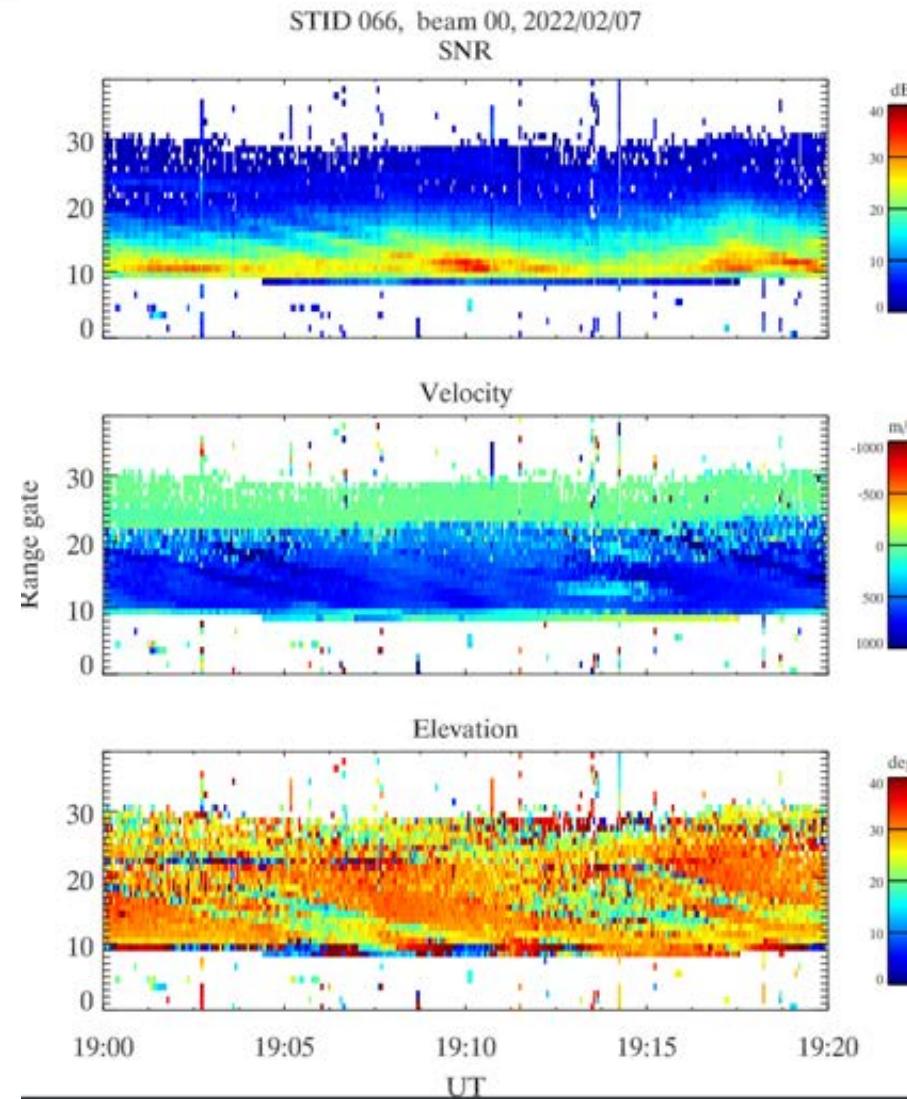

2019-2023: New Capabilities

Increased
Time resolution

means...

More data

2019-2023: Improved Resources

Improved Internet Access in Canada's North

Network Access (to 2012-12-14)	400.00
GST	20.00
Network Access (to 2013-05-13)	369.95
GST	18.50

Trans Date	Description	Amount
07/16/2022		\$130.00
Trans Date	Description	Amount
08/16/2023		\$115.00

Ongoing Challenges: 2023 and Beyond

- Varied funding agreements among international partners
- Diverging instrument hardware and software
- New instrument capabilities:
 - Increasing data quantity
 - increased data complexity
- Historical, proprietary data formats
- Lack of labour, expertise, funding among international partners

Three Decades of Data Management

Drivers of change

- Disruptive events
- Opportunities
- Defining goals
- Policies
- Procedures
